ES-5080 - Digital Receiver Based ELINT/ESM System ES-5080. Harris Corporation. "Harris, with the ES-5080 digital receiver based ELINT/ESM system provides a cost effective, state of the art design. The ES-5080 utilizes the latest digital receiver technology for extremely accurate pulse measurements. The inherently flexible design allows a broad

range of configurations: Number of channels, selection of antennas, networking capability. This system is deployed domestically and internationally for coastal surveillance, airborne, maritime and land based applications. Cost effective ELINT/ESM system for extremely accurate pulse measurements: Harris developed the CS-5060 in the early 1990's to meet a US Army requirement for a single channel ELINT system tied to a high-gain rotating antenna. The Army originally installed it on ground vehicles. In the late 1990's, the Army installed a CS-5060 on several RC-12 Guardrail aircraft. Over the past 20 years, CS-5060 systems have been sold abroad in both airborne and ground-based configurations. These systems are the predecessor to the ES-5080".

HAMMR - Highly Adaptable Multi-Mission Radar (HAMMR) system. 13.03.2020 // U.S. defense contractor Northrop Grumman completed a successful government customer demonstration of the Highly Adaptable Multi-Mission Radar (HAMMR) system at Eglin Air Force Base, Florida. Northrop Grumman's HAMMR is a short- to medium-range X-Band Three Dimensional (3D) radar that utilizes the proven Active Electronically Scanned Array (AESA) AN/APG-83 F-16 fighter radar in a ground-based, sense on-the-move role. HAMMR provides robust multi-mission 3D performance for air surveillance, weapon cueing and counter-fire target acquisition missions in either a 360-degree or sector-only staring mode. HAMMR delivers the unprecedented ability to provide force protection while operating on the move, significantly increasing warfighter survivability.

LA-8/P - Aircrew Laser Pointer: LA-8/P ALP (Aircrew Laser Pointer) (NSN 5860-01-564-8167 and NSN 5860-01-558-4706). #Aiming Lasers, Target Locators. The LA-8/P Aircrew Laser Pointer (ALP) is a finger-mounted laser that has the capability to direct fires, identify friend and foe, and signal adjacent formations during night operations. It is mounted on a fire-resistant fabric designed to attach to the aircrew member's glove. Because it is hand worn, it does not interfere with aircraft operation. The master arming switch allows a high-power (Class IIb) or low-power (Class I) infrared laser operation. A momentary fire button allows easy activation with the thumb. An indicator LED is lit when the momentary fire button is activated. The ALP incorporates a laser diode that projects a pinpoint beam that is brighter and more defined than other lasers. ~ The Aircrew Laser Pointer (ALP) is a finger-mounted laser. Армия США, ВВС США, ВОВР США(?). 5D = LST-5 with DAMA. Особенности LST-5D: Add DAMA (DAMA SATCOM) (добавлен режим CC DAMA — встроенный модем ф. Titan Linkabit). "The current single-channel TACSAT ground terminals found at the brigade/battalion level are the AN/URC-101, AN/URC-110, AN/WSC-7, AN/PSC-3, AN/PSC-5, MST-20, LST-5D, LST-5E, and the VHS-4. These terminals provide reliable, highly portable communications support. They have minimum setup and tear down time and satisfy a need for extended distance communications. The system operates in the UHF band between 225 MHz to 400 MHz and uses fleet satellite (FLTSAT) and UHF follow-on (UFO) space segments". SATCOM — 5 kHz narrowband Non-DAMA; 25 kHz wideband Non-DAMA; 5 kHz DAMA (USAF DAMA); 25 kHz DAMA (Navy DAMA). U/W KY-57, KY-58, KY-99, KYV-5, KG-84A, KG-84C (with 1, 2, 3, 4 modes).

LST-5E — носимый (портативный) ДМБ (МБ/ДМБ) — АМ/ЧМ одноканальный терминал (приёмопередатчик) спутниковой связи и обычной радиосвязи (LOS) (со встроенными средствами шифрования) [DAMA Satellite Communications (SATCOM) Transceiver; DAMA SATCOM Radio Set; Satellite Communications (SATCOM) Transceiver; SATCOM transceiver; single-channel TACSAT ground terminal] LST-5E (AN/PSC-10). Пр-ль: Motorola (?). Армия США, ВВС США. Ок. 1994 г. ВМС США начали получать LST-5E в апреле 1994 года. -5E = LST-5 w/embedded encryption, т.е. оснащен встроенными средствами шифрования связи (AN/CSZ-1 Sunburst или AN/CSZ-1A Sunburst II, Cryptographic Processor). Ранее выпущенные терминалы LST-5B или LST-5C модернизировались до уровня LST-5E. LST-5E могли модернизировались до уровня LST-5D (т.е. с поддержкой DAMA режима CC; дополнительно устанавливается DAMA-модем ф. Titan Linkabit). Вероятно модерниз. вариант LST-5E (с добавлением DAMA возможностей LST-5D) получил название AN/PSC-10. РДЧ: 225-400 МГц; АМ/ЧМ; выход. мощность 18 Вт (средняя/макс.). Используется с системами CC / IC3 CC FLEETSATCOM; UFO (Follow-On); и др. Компоненты: приёмопередатчик RT-1721/PSC-10(?); AN/CSZ-1 Sunburst или AN/CSZ-1A Sunburst II, Cryptographic Processor; и др. MAPS Gen I — Mounted Assured PNT (Positioning, Navigation and Timing) System (MAPS) Generation 1, (MAPS GEN I). General Dynamics Mission Systems. Mounted Assured PNT (Positioning, Navigation and Timing) System (MAPS) Generation 1, (MAPS GEN I), a powerful suite of new hardware and software that will ensure Soldiers have assured position and timing to navigate in a GPS degraded and denied environment. As adversaries across the spectrum field new capabilities to disrupt and degrade GPS, Soldiers will need more fortifications and assurances in those systems. The MAPS Directed Requirement was approved in January of this year, which was the first step to ensuring Soldiers receive the most modern PNT equipment as it becomes available. General Dynamics Mission Systems is the current provider to the U.S.

Army's MAPS Program of Record. MAPS Gen 1 is a modular vehicle-mounted system that monitors GPS signals for validity and sends accurate data to military devices even when GPS signals are degraded or denied. Without trusted data, GPS-dependent systems fail to operate properly, hindering operational capability and soldier safety. MAPS Gen 1 is scalable and upgradable so warfighters will benefit from additional features and capabilities throughout fielding and product lifecycle. This system is now available for the U.S. Army to purchase via the Common Hardware Systems (CHS-5) contract for indefinite delivery/indefinite quantity (IDIQ) acquisitions.

MUOS — Mobile User Objective System (MUOS): MUOS. USN. Developed for the U.S. Navy by Lockheed Martin, the Mobile User Objective System (MUOS) is revolutionizing secure ultra-high frequency (UHF) satellite communications (SATCOM) for mobile forces. MUOS satellites are equipped with a Wideband Code Division Multiple Access (WCDMA) payload that provides more than 10 times the communications capacity over the current Ultra High Frequency (UHF) satellite system. Each MUOS satellite also includes a legacy UHF payload that is fully compatible with the current UHF Follow-on system and legacy terminals. This dual-payload design ensures a smooth transition to the cutting-edge WCDMA technology from the legacy system.

MXF-492, MXF-493, MXF-494 - MXF-492, MXF-493, MXF-494 Starblazer Multi-band ECCM Communication Systems. Raytheon. // Starblazer Ground Mobile Multi-band Radio System was developed to address the complex and varied demands of the modern military and meet the stringent tactical voice and data communication requirements of today's armed forces and readily adapts to meet new communication requirements. The system is currently being fielded. The Starblazer team provides worldwide product support to maximize availability and minimize life cycle costs. // Starblazer Ground Mobile Radio Systems are based on multi-band, multi-function radios designed to provide the military VHF and UHF capability required for ground-to-air and ground-to-ground Line-of-Sight (LOS) communications. They also provide capabilities for civil VHF applications for air traffic control and civil maritime band. The Radio provides both multi-band AM/FM Ground Mobile single-channel communications and UHF ECCM waveforms such as Have Quick I, II, SATURN or National ECCM. Radio operations are selected via a menu driven interactive keypad and display plus discrete controls located on the front of the radio. The radio provides AM single-channel voice and data communications in the UHF frequency band, and FM single-channel voice and data communications in both VHF and UHF bands. The radio also provides clear voice and 16 kbps secure voice operation with external encryption equipment. Each radio may be tailored to specific user needs with such features as external or embedded GPS Receivers, RF Power Amplifiers, selection of ECCM modes of operation and installation features.

Wooten, Technical Evaluation of Field Intensity Meter NM-52A, Final Rpt., Naval Air Test Center, Patuxent River, Md., Problem No. 60-16 ID (695B), 3 March 1961). "The radio interference-field intensity meter NM-52A was technically evaluated and compared to its prototype, radio test set AN/URM-17. The NM-52A RI-FI Meter is a sensitive radio receiver, operating as a selective radio frequency voltmeter over the 375 to 1000 mc portion of the radio spectrum. As a selective RF voltmeter, it can measure RF voltages in the range of 1.0 microvolt to 1.0 volt. As a field intensity meter with an antenna supplied, it can measure 10 microvolts per meter to 10 volts per meter (at 375 mc). It was concluded that with suggested modifications, the NM-52A is superior to the AN/URM-17."

PDP-11/34M — миникомпьютер [ ] PDP-11/34M. Пр-ль: Norden Division of United Technologies Corp. (по лицензии Digital Equipment Corp.). MILITARIZED MINI FROM NORDEN FEATURES PDP-11 COMPATIBILITY. "Computerworld" December 20, 1976. // Norwalk, Conn. — The PDP-11/34M from the Norden Division of United Technologies Corp. is a militarized digital minicomputer compatible with the Digital Equipment Corp. PDP-11, according to the vendor. The ruggedized mini features an extended instruction set with more than 400 instructions, the ability to perform single- and double-operand instructions, a memory expandable to 128K words, 900 nsec cycle time in core, byte parity, memory management, hardware multiply and divide and a floating-point option, the vendor said. It can operate in environments from -65degrees F and in altitudes up to 85,000 feet, Norden said. In addition the unit can withstand vibration, shock and humidity: it meets the requirements of the MIL-E-5400, 16400 and 4158 specifications, the firm added. A basic one-half chassis PDP-11M costs \$15,200 to \$20,200 depending on configuration; the full-chassis system costs \$18,500 to \$24,700. A system with 32K of memory and a communications interface ranges in price from \$28,000 to \$37,500. Norden said from Helen St., Norwalk, Conn. 06856. ( ) "Norden's militarized minicomputers are the PDP-11/70M, the PDP-11/-34M and the LSI-11M microprocessor. All have complete software identical to DEC's commercial software".

It is capable of direction finding action on signals with no modulation. An AN/USM-32 oscilloscope provides visual indication of the presence of amplitude or pulse-modulated signals above a minus 80 dbm level. Headphones provide audible indication of amplitude or pulse modulated signals above a minus 80 dbm level. A continuous wave meter provides visual indication of the presence and relative strength of CW signals above a minus 70 dbm level. For D/F action the T-21 utilizes a directional horn mounted on a collapsible tripod. The horn is normally in the vertically polarized position."

R-1125/FLR — Wide Band HF Receiver. BMC США. Countermeasures Receiver R-1125/FLR is a high-frequency, superheterodyne receiver employing triple frequency-conversion for the reception of signals in the frequency range from 2.0 mc to 3.0 mc. It is intended for use in special operating categories and provides a 65 kc output signal having a 60 kc bandwidth. Receiver operation is characterized by extreme frequency stability, permitting long periods of unattended operation. A high level of performance can be expected despite adverse conditions. Initial tuning is obtained in 100 kc increments with an interpolation oscillator (in the receiver) which provides continuous tuning between increments. The frequency range is covered in four bands with counter-type tuning dials which permit accurate pre-setting to a desired frequency. A special drift-canceling circuit contributes to the receiver's high performance by canceling any frequency error as the result of frequency drift in the high-frequency oscillator. Drift in the interpolation oscillator circuit is minimal at the low frequency used. Oscillator- Power Supply O-928/FLR supplies operating power from one to five R-1125/FLR, and includes a 100-kc crystal oscillator which provides a standard reference signal (for incremental tuning) to each receiver. Within the specified frequency range, the R-1125/FLR output is an intermediate frequency band from 35.0 to 95.0 kc which retains all modulation of the received signals with a high degree of fidelity.

R-1230/FLR — Wide Band HF Receiver. BMC США. 2-32 mc coverage with 60kc bandwidth output - triple conversion. Used in AN/FLR-11 and AN/FRA-54 systems. // The complete system consisted of two units, one with the RF/IF circuitry and another with the power supply O-928/FLR. The power supply unit was used to power up to 5 RF units and also provides a 100kc reference signal. The power supply section very rarely shows up as surplus. Designed by National Radio. Uses nuvistors as well as miniature tubes. The earlier R-1125/FLR was upgraded to R-1230/FLR via a field change which added

a cooling fan.

R-1247/GRC-129 — радиоприёмник. Вариант радиоприёмника R-390A (Radio Receiver R-390A/URR). "R-1247/GRC-129 receiver was not developed for NASA as is often reported, but for the U.S. Air Force. Developed under contract AF 30(635)30962 by Manson Laboratories, GRC-129 was a frequency synthesized, SSB upgrade to the older AN/GRC-26D mobile, truck mounted HF "RATT" system used by the Army and Air Force. NASA did acquire a few R-390As equipped with Manson Labs synthesizers, and these were briefly used at the Bermuda Tracking Station, and perhaps others. But, they were quickly removed from service due to problems with the synthesizers. Many stock R-390As were used by NASA throughout the ground network, and on the Apollo Tracking Ships as general purpose HF receivers, and especially as tuneable IFs for downconverters".

R-2322/G — Receiver, Radio; HF SSB Receiver R-2322/G (NSN 5895-01-205-6269). Армия США, BBC США, BMC США. part of AN/TRC-179(V)1 FT, AN/TRC-179(V)3 SS. R-2322/G military tactical HF SSB receiver. It covers 2 to 30 MHz in 10Hz steps generated by a fast DDS (Direct Digital Synthesizer). The receiver was designed to handle fast frequency hopping, hence the fast DDS. The R-2322/G receiver is basically the same as the better known RT-1512/G receiver/exciter with the exception of two transmitter modules which were omitted from this receiver. The receiver uses the C-11670/G control head, which is also used for the RT-1512/G receiver/exciter and the RT-1511 man-pack radio. The receiver is part of the AN/GRC-215 HF SSB tactical radio installation, a mobile shortwave communication system that was developed in the mid-eighties as a nuclear survivable (EMP hardened) NATO communication network, to be rolled out in the European theater. This roll-out was cancelled when the first cold war ended. As a result, most of the never used GRC-215 equipment ended up in the scrap mill, but luckily this receiver made it to the surplus sales.
